| 57. Polish “hologram stamp” coin   | <b>E26</b> | 50 |

On **November 19, 2008**, a beautiful 10-zloty silver coin with a ‘hologram stamp’ on it was issued. Although it is not a real postage stamp, it is included here since it is of great philatelic interest. The coin was issued in commemoration of the 450<sup>th</sup> anniversary of postal services in **Poland**. The hologram on the face of the coin shows a stylized image of a *mounted post rider playing the trumpet*. The reverse side shows a stylized image of a 16<sup>th</sup> century post courier as well as a stylized fragment of a 17<sup>th</sup> century engraved copperplate with an image of an inn, and a larger image of a postal trumpet. It was on October 18, 1558, that King Sigismund II August (Zygmunt August) issued an official legal act on Polish postal services. That day is therefore recognized as the beginning of postal services in Poland. The first regular postal service ran from Cracow via Vienna and Graz to Venice. A letter took nine days to reach the addressee. A few years later postal services were established between Cracow and Vilnius. MAPPA POCZTOWA on the coin means a postal map, i.e. a map where postal carrier routes are marked. The coin (composition: 92.5% silver, size: 32 mm, weight: 14.14 grams) is shown in Fig. 5-6.1.

Germany, *Phil Selection* Album issued by Deutsche Post 1998, No.1761/10000 300

**Fig. 5-4.3.** The Deutsche Post *Phil Selection* Album.

Fig. 5-4.3. The ten-stamp hologram souvenir sheet included in the *Phil Selection* Album.

A special, large ten-stamp hologram souvenir sheet was issued on **October 8, 1998**, in **Germany**. It was the Aquatic Warbler sheet which was included in the limited-edition (10,000) *Phil Selection* Album issued by Deutsche Post (Fig. 5-3.3). This beautiful 55-page publication contains detailed information about how postage stamps are designed and produced. It covers most of the techniques involved, including how holograms are manufactured and attached to stamps. The large ‘Für die Wohlfahrtspflege’ ten-stamp hologram sheet depicts two birds, two aquatic warblers (*Acrocephalus paludicola*) [in German: Seggenrohrsänger] is inserted in the album, shown in Fig. 5-4.4. The hologram stamp (denomination is 110+50 pF) is based on the conventional 1998 ‘Seggenrohrsänger’ German stamp. The hologram sheet size is 210 mm by 105 mm and the stamp size is 35 mm by 35 mm. *Two aquatic warblers in the reed* appear in each hologram stamp on the sheet. ‘Seggenrohrsänger’, ‘DEUTSCHLAND’ and ‘FÜR DIE WOHLFAHRTSPFLEGE’ are also printed on the stamps. The hologram production process is described on two pages in the album (Fig. 5-4.5). Another hologram stamp is also included in this album which is the ‘Wuppertal cable-railway’ hologram stamp. This stamp appeared later in the *2001 Year Book of German Stamps*. The album page with this hologram stamp together with four regular stamps is shown in Fig. 5-4.6. The master hologram was recorded by Irina Menz at Holographic Systems München GmbH and produced by Leonhard Kurz GmbH.

## VARIATIONS, ERRORS, MISSING HOLOGRAMS in ALBUM 10

Misplaced holograms in the US1989 25¢ envelopes, high or low position, 3 envelopes	30
Hologram error in the US 1989 25¢ envelope	50
Hologram missing in the US 1989 25¢ envelope	100
Hologram error in the US 1995 32¢ envelopes, 3 envelopes	150
Misplaced holograms in the 1991 ‘Polish PHILA NIPPON’91’, 2 sheets	100
Misplaced holograms in the 1992 ‘Space Stamp’ from Canada, high or low position, 2 FDCs	60
Hologram errors in the 1992 Space Stamp from Canada, different errors, 13 stamps	260
Misplaced holograms on the 1998 ‘Ducks and Geese’ stamps from Indonesia 18 stamps	360
Hologram error (silver backing missing) in the 2010 ‘Nigerian Arts’ N50 stamp	50
Cancellation of the 2001 ‘Nobel Prize Gabor’ stamp on 29/9 2001 (Officially issued on 2/10 2001)	100

### Miss-cut holograms

A variation that often occurs in hologram stamps depends on how they have been cut out from the production sheets. This can vary depending on the tolerances within the production machines. In particular, variations in the 1991 ‘Canada in Space’ hologram stamp have been reported. It should be noted that the hologram was produced larger than the final size used on

the stamps. On the promotional folders the larger quadratic hologram was attached, as shown in Fig. 6-4.5. The TV-screen-shaped cut-out of holograms for stamps depends on the accuracy of this process. In some stamps the hologram image is cut so that the image appears higher than in other stamps where it appears lower, see Fig. 6-4.6. There are several other errors reported with regard to this particular hologram stamp. During the embossing process some defects can occur when a large amount of holograms is produced from the same nickel shim. Defects such as a ‘black hole’ and a ‘black line’ have been reported. ‘Flight path’ or ‘Meteor shower’ are other variations or errors (small black dashes in blue background) shown in Fig. 6-4.7 ( > between these marks < ).

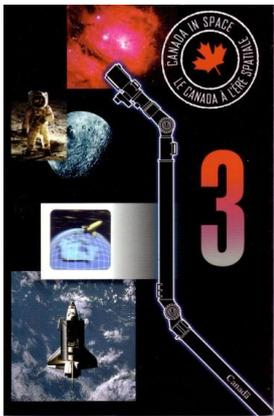

Fig. 6-4.5. Large hologram.

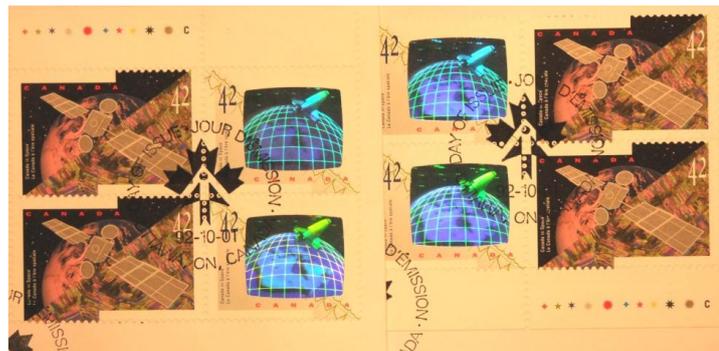

Fig. 6-4.6. High and low hologram images.

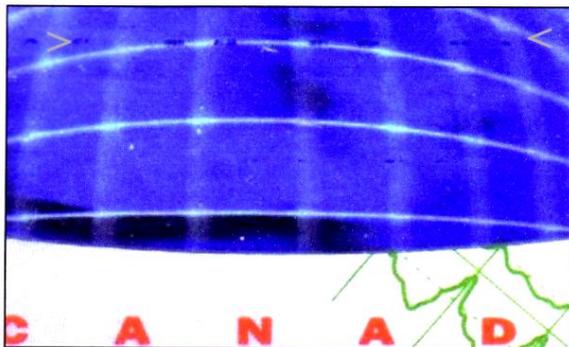

Fig. 6-4.7. Flight path or meteor showers.

### Misplaced holograms on stamps

Another variation that can occur is a change in the exact *position* of the hologram on the printed stamp. For example, for the 1992 Canada Space stamp the following information was provided from the hologram producer Bridgestone Graphic Technologies Inc. responsible for the hologram mastering and production. “The holograms were produced on pressure sensitive material and were positioned on the congenitally printed stamps with a tolerance of +/- 1/64”. Any larger variation in the position can therefore be regarded as an “error”. The 1991 Polish Phila Nippon butterfly souvenir sheets reveal serious errors in the position of the holograms

(Fig.6-4.8). The 1998 duck stamps from Indonesia have several stamps with large hologram position variations (Fig. 4-4.9). None of the holograms on these stamps were supposed to be positioned so that they covered the ducks (see Fig. 3-11.11). There are also variations in the position of the attached holograms inside the three US envelopes. For example, the hologram image can be attached so that the image is positioned higher in some envelopes or slightly lower in others, as shown in Fig. 6-4.10. There are also envelopes with large errors in hologram position as shown in Fig. 6-4.11.

Fig. 6-4.8. Hologram position errors.

Fig. 6-4.9. Hologram position errors.

Fig. 6-4.10. Small hologram position variations.

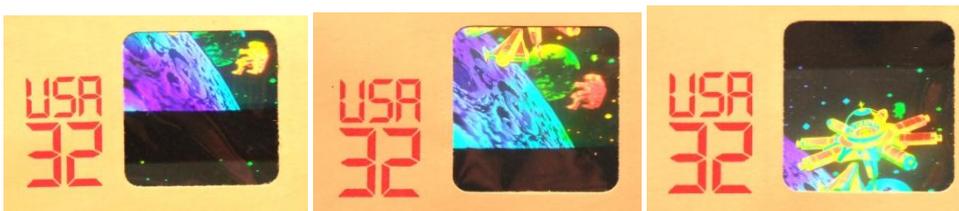

Fig. 6-4.11. Large hologram position errors.

## Missing holograms on stamps

There are examples of stamps where a hologram is completely missing, for example, US envelopes without the inside hologram in the cutout (Fig. 6-4.12). In one box of 50 envelopes delivered from the US post office, one envelope had no hologram. You may ask how easily a hologram can be removed from a stamp. It is not impossible to do that. However, by a microscopic investigation of a stamp from which the hologram has been removed it is likely that broken paper fibers will be revealed. The hologram is attached to the stamp by hot-stamping, which means that if the hologram was removed an indentation in the paper should be visible. Caution is therefore advised, and an expert certificate is strongly recommended if one is about to invest in a stamp “without a hologram”.

## Malaysia ‘1Malaysia’ sheet with INVERTED WATERMARK

A10 25

Malaysia issued on **August 31, 2009**, issued a souvenir stamp with a hologram, the RM5 ‘1Malaysia’ concept which is based on the principles of ‘People First, Performance Now’. The CPM **watermark is inverted** in one hologram stamps, see Fig. 3-22.25 and Fig. 3-22.26. The stamps were designed by Hazel Design Sdn. Bhd and printed by Percetakan Keselamatan Nasional Sdn. Bhd.

---

**Total estimated value:**  
**SPINK estimated value:**

**£5503.00**  
**£2000 to £2500**

**Please note:**

The estimated value/item here is based on current eBay prices for items which are still possible to obtain. However, many of the items included in the collection are no longer possible to find. This is, in particular, the case for the limited-edition items in **SPINK LOT 1903**. If they could be found they would most likely be offered for much higher prices than indicated in the estimated value listed here.

***This collection (SPINK LOT 1903 and SPINK LOT 1908) represents most likely the most comprehensive collection of postage stamps, souvenir sheets with holograms as well as other items such as for example FDCs with cachet holograms.***
